FOG TECH

Fog Tech by MotoSolutions is designed to eliminate the ever-annoying fogged-goggle syndrome. While working on our winter issues, I found myself face down and sweating in the snow: a direct result from lifting, dragging and swearing at my motorcycle. I had applied Fog Tech onto my goggle that morning and was quite impressed that my single-paned moto goggle stayed clear all day. The very next day was another ride in the snow, except it was cold as heck. Again, Fog Tech kept my goggle clear.

Fog Tech comes in a 30-milliliter squeeze bottle (\$16) as well as in the form of convenient premoistened towelettes (a five-pack for \$5). The towelettes

were my favorite. Just open the package, wipe the inside of your lenses until they're wet with the product and let it dry. That's it. You're done. Go ride in fog-free bliss. The goggle should be clean and dry before applying, but other than that, it's a no-brainer. Fog Tech rinses off easily with water, and it's enviro-friendly. Try it—you'll like what you see. —*Jesse Ziegler*
