MotoSolutions introduces Water Repellent Coating for
Plastic Protective Eyewear

RODEO, Calif., Mar. 15, 2008 /News/ -- MotoSolutions has just released their newest product, Raincoat® Advanced Water Repellent Coating. Raincoat® is designed to remove the vision distorting water drops from plastic lenses, glasses, shields and goggles. Easy to apply and long lasting, Raincoat® is a transparent hydrophobic coating that causes water to bead up and instantly roll off plastic surfaces. Also Raincoat® keeps lenses cleaner by removing the drops that can attract and hold dirt, salts or grime. "I believe that this product will find great utility in the outdoor sports market." said Gene Menzies, owner of MotoSolutions, a major anti-fog provider for the sports and industrial safety markets. "Rain or water spray has always plagued the plastic shields used while motorcycling, cycling, and playing football in the wet conditions. But there are also vision problems encountered on personal protective equipment (PPE) when employees are pressure washing, using water to fight fire, or working outdoors in the rain. Raincoat® effectively improves vision for those employees wearing safety eyewear who encounter wet conditions. We also see benefits for improving the view through security camera domes, plastic airplane windshields or helicopter windows and even jet canopies."

Raincoat® will be packaged in small pouches or as a kit with an applicator and buffing cloth. Raincoat® is effective on typical plastics such as polycarbonate, acrylic, PVC, etc. It will not work on glass surfaces. MotoSolutions, based in Rodeo, CA, was established in 2003 with the mission of providing clear vision through protective optics. Their proprietary formula anti-fog, Fogtech(R), is standard safety issue on protective goggles, glasses and shields for many of the Fortune 500 Industrial companies. Additional information is available online at www.motosolutions.com.
